

THE WIRELESS LEAK SENSOR AKWA*

Is designed to send a signal to the Water Alarm controller to accurately locate water damage.

The "Smart Alarm" function of the wireless leak sensor validates whether the alarm is real or false.

Before sending a signal to the Water Alarm controller the sensor validates whether it is caused by a water leak or a simple temporary wet contact. An alarm signal is sent to the controller. In the event of a false alarm, AKWA will reopen the Master valve.

Battery charge level monitoring:

A notification is sent when the batteries are weak.

Supervision of the sensors with the controller:

A notification is sent when a sensor is missing.

Discreet, the wireless leak sensor requires little space and can easily fit in various places (sink, toilet, water heater, etc.).

CHARACTERISTICS

- Puddle detector
- Wireless technology
- Discreet white sensor
- AAA batteries with long battery life
- Automatic check of the battery charge
- 3 years warranty

SPECIFICATIONS

Frequency	433,42 MHz
Duracell Quantum	AAA Alkaline Battery
Battery life	3-4 years
Contacts	Stainless steel
Signal range	600' (182 m)
Case material	ABS – Plastic
Operating Temperature	0 °C (32 °F) to 49 °C (120 °F)
Weight	50g
Dimensions	L 67 mm (2,6") x L 26 mm (1") x H 24 mm (0,9")
Color	White
Attachement	Velcro
Certifications	FCC / IC, CE

* Any reference to the only term "AKWA" means the water leak prevention and detection product "AKWA Technologies", while any reference to the whole terms "AKWA Concierge" means another product from AKWA Technologies Solutions inc.
